

Premofix® PM/ICD Set

The innovative bandaging system for Defibrillators/ Pacemakers implantation aftercare

Indication

As protection and compression support in the thorax area, especially to support the wound healing after the implantation of medical devices like pacemakers or implantable cardioverter defibrillators (ICD).

Product Characteristics

The innovative five layer Material

- guarantees excellent stability
- secures the durable short stretch compression
- enables a soft surface for patient comfort
- with special bacteria protection layer
- free of latex
- the user can decide the level of pressure by extension

The special product design

- Multifunctional - one bandage for both sides: just flip the bandage to apply it left or right
- Color coding - supports the correct application (green/ white Velcro)
- One size for all patients – no extra sizes necessary
- High flexibility due to different application possibilities
- All in one set available (Premofix PM with special compression device)
- single use product system

The outcome

- No sandsack or sticky plasters necessary
- No skin irritations anymore –easy to remove
- Fast and easy application
- If necessary: Fast and easy to adapt
- Enables an early mobilization of the patient
